## Comparative Study of Wind Energy Conversion SystemDriven by Matrix Converter and AC/DC/AC Converter

## K. Bedoud, T. BAHI, H. MERABET

**Abstract:** In this work we presents comparative study of avariable speed wind energy conversion system (WECS) basedon the doubly fed induction generator (DFIG) driven by twoAC/DC/AC converters and WECS driven by matrix converter(MC). The whole system is presented in d-q-synchronousreference frame. For this purpose, the control of the active and reactive power using PI controller is verified usingsoftware Matlab/Simulink, studies on a 1.5 MW DFIG windgeneration system. Simulation results obtained are presented analyzed. The results show the high performance and improve the electric energy of the control strategy adopted in WECS based on a DFIG driven by a MC.

Keywords : wind systems, doubly fed induction generator, matrix converter, simulation
