Study of structural, electrochemical and antibacterial properties of PVK pure and Doped with TiO2

O. Bouriche, H. Kouadri

Abstract: Polymeric thin films of poly (N-vinylcarbazole) (PVK) with nano-crystalline titanium oxide (TiO) were fabricated by using bath deposition method. The complexation of the polymer was confirmed by Fourier transform infrared (FTIR) and UV-Visible studies, the antibacterial activity was tested with various percentage, from 1wt%, 3wt%, 5WT% of doping, with staphylococcus aureus, Bacillus subtilis and Escherichia coli in the absence of light.

Keywords: Poly (N-vinylcarbazole), Antibacterial Activity, Titanium Oxide (TiO2), DMSO
