## Study of the Effet of the Geometry Shape of defecton the Reliability of NDT Device

## Z. Oudni, H. Mohellebi

**Abstract**: This work concerns the study the effect of random properties and defect geometry on the reliability analysis of the non-destructive testing inspection device. Two kinds of defects geometries are considered as rectangle and triangle shapes respectively. A stochastic finite element method (SFEM) was used to solve the 2D electromagnetic equation incylindrical structure. The results obtained for both rectangle and triangle random shapes are given.

Keywords: random geometry, random propertie, nondestructive testing, reiability analysis, stochastic finite elements
